## **Introduction:**

Often you require maintaining certain transactions which calls customizing table in the live production system.

For example:-

- 1) Maintain exchange rates
- 2) Opening and closing the period
- 3) Maintain overhead rates
- 4) Maintain assessment cycle in cost center accounting and profitability analysis.

These transactions actually require to be maintained every month or every year and as such are needless to be transported from the development system every time.

**But a live production system is a non modifiable client and is not open for customizing.**

Then how do you go about maintaining the aforesaid transactions which requires to be maintained directly in the production system?

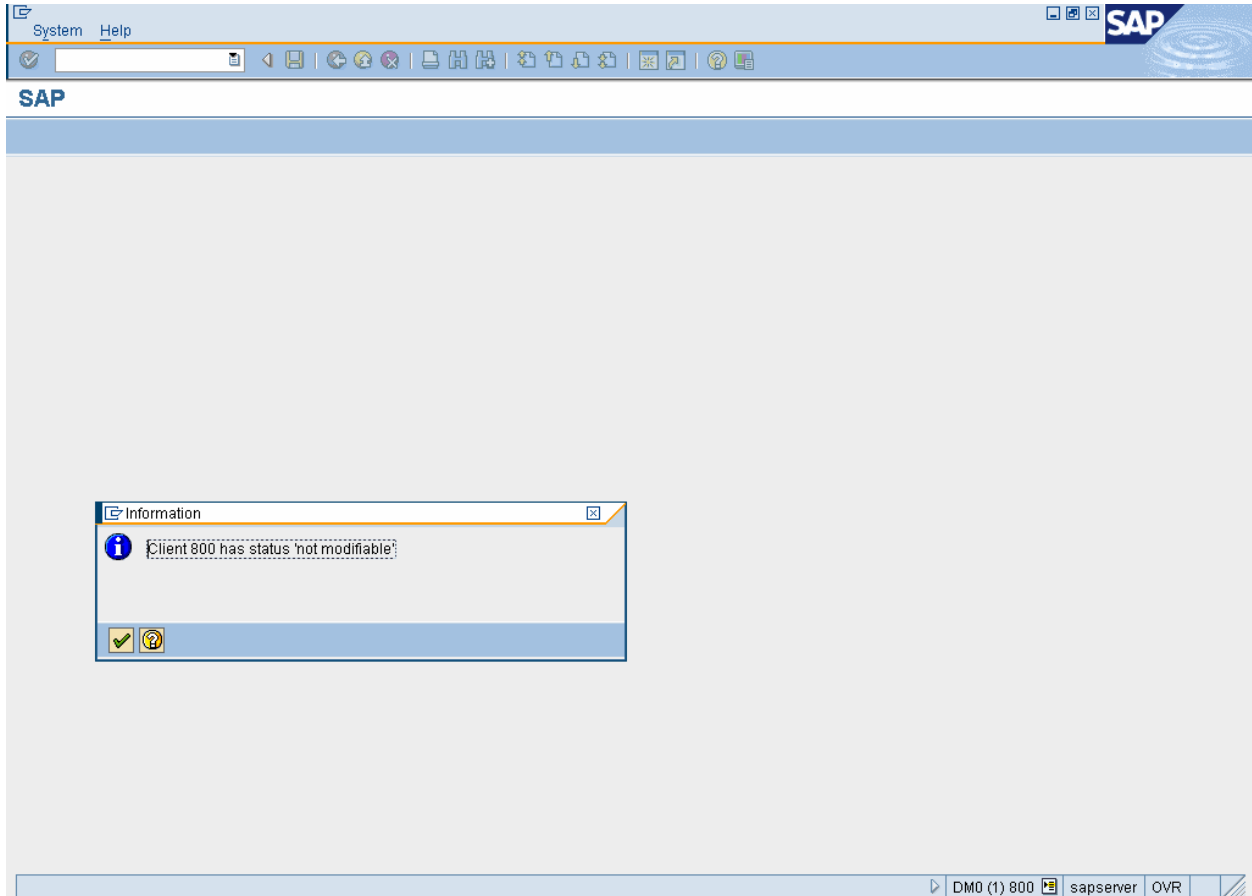

**In this material we demonstrate what requires to be done so that the transactions can be directly maintained in the production system.**

We hope you will love this additional information which is not known by many functional consultants as well as basis consultants too.

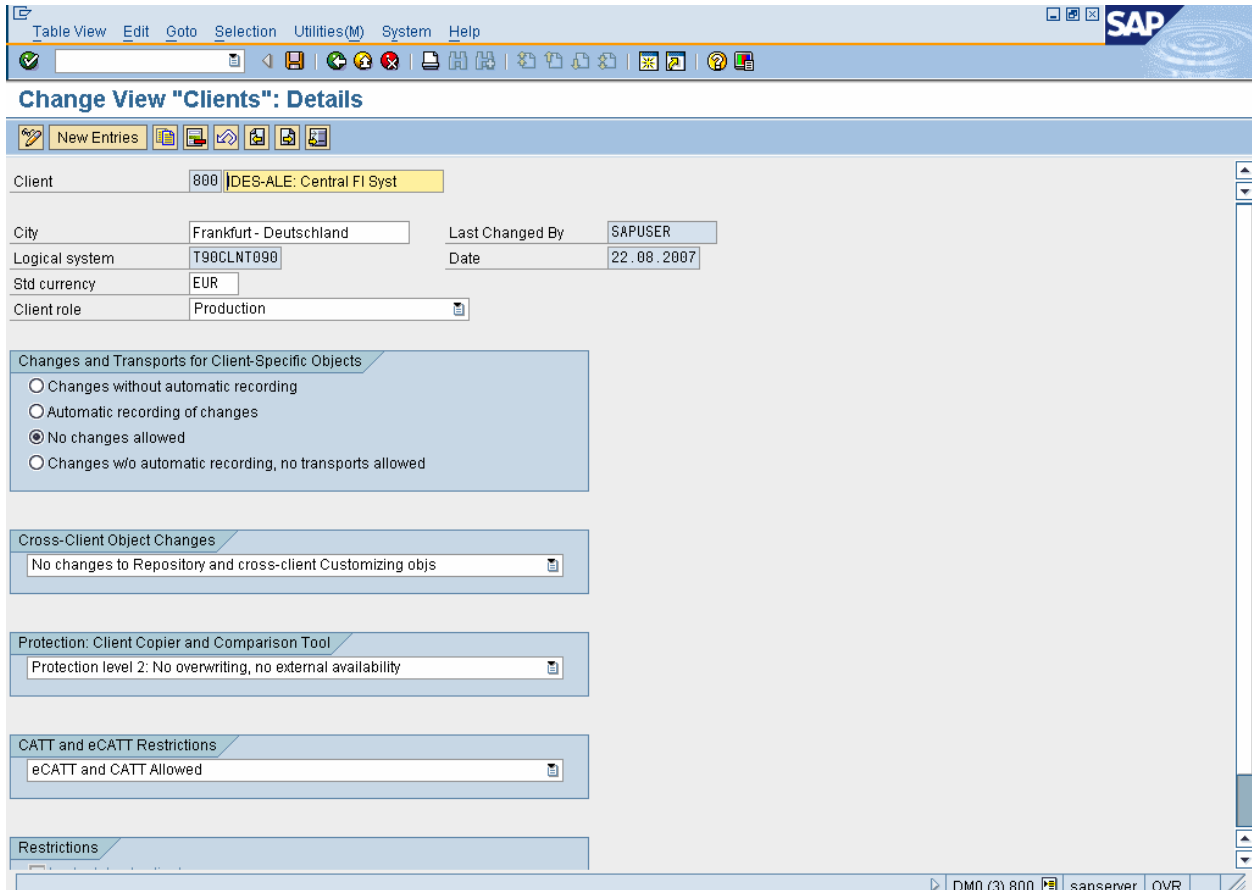

You have the secret now; make the difference with this knowledge.

You get the following message

This is because of the following setting in Production client. A Production client is not open for customizing. All customizing will be done in the development system and transported to quality system and then to production system.

To allow you to maintain directly in the Production system proceed as follows:-

Click

Where-used Transaction S\_ALR\_87008272 in Area menus (1 Hits)

Area menu ID	Short description
<input type="checkbox"/> KKSM	Product Cost by Order

DM0 (1) 800 sapservers OVR

Therefore the area menu is KKSM

Click 

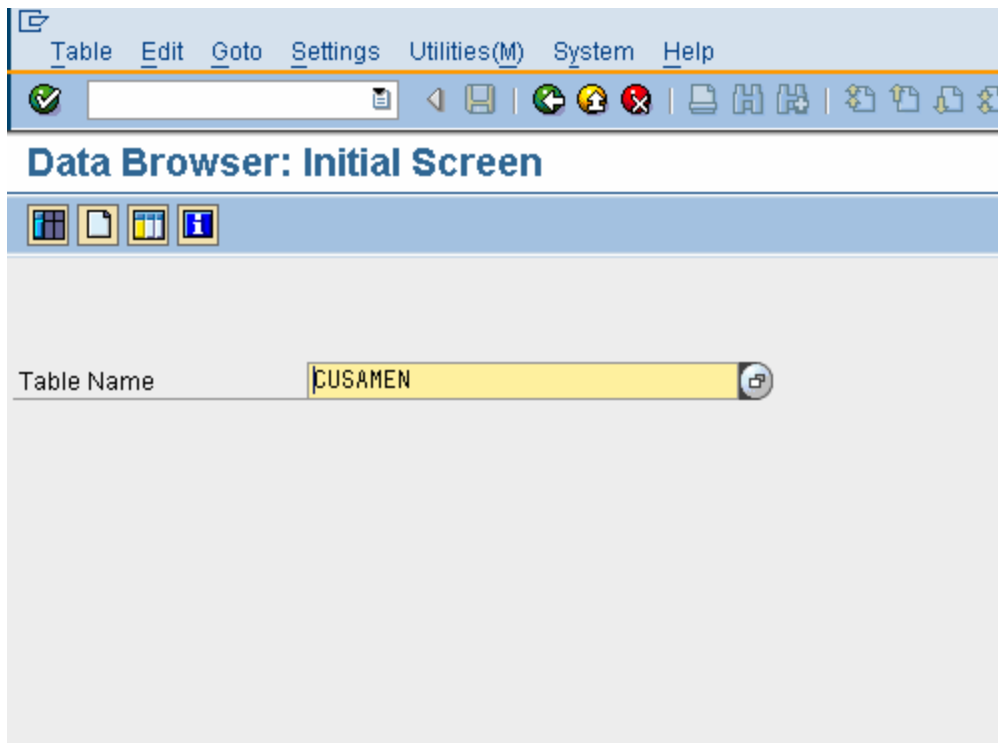

And the IMG activity is SIMG\_ORKK\_WERK\_KZM 2

Note down the 2 values above.

The IMG activity object **SIMG\_ORKK\_WERK\_KZM2** needs to be updated in the table CUSAMEN in SE16

This should be updated in the development system and the table entry transported to the production system.

Use transaction code SE16 in the development system

Click
